

Ryan Yang

Design Idea: Web 1.0, finish up, add horror element?

My idea:

- ❖ Using my Midterm design I want to add the activities I have in mind into those place holders that I currently have.
- ❖ I want to make the character more interactive using [p5.js](#). (giving it the ability to track my cursor and moving its eyes).
- ★ **Horror element idea(NEW!):**
- ★ I want to add an easter egg where if I press the character the whole vibe of the website will change. Giving it a more hellish, dark vibe.
- ★ Some ideas I have were using a grid, maybe adding more images (fire and weird gifs?)
- ★ Add a QnA where you can talk to the Character (hopefully this is possible) using Javascript
- ★ Maybe using jQuery and adding other elements to make it scary.

Use of the 3 different interaction:

- [p5.js](#) makes the character move its eyes. Also using [p5.js](#) to actually add the games
- Javascript to make a QnA
- JQuery to create hidden items or make items disappear and reveal other items.
